OBSERVATORIO DE LOS CONDORES

While the adventurer moves along the path, one would come upon the isolated programmatic elements revealing the transition from the heavy grounded spaces, starting at the hitchin' post, to the spaces of the shelter and parilla, that each lift off the ground more and more, ending at the observatory, as it takes off from the ground.

Each space is left as open as possible keeping the focus on the surrounding views while at the same time remaining as low impact structures. Due to the remoteness of the site, it was necessary to focus on local materials and building methods.

LOS COMPANEROS
Condor Ridge, Condor Valley
